SO314422 F-84G Thunderjet stencils

© ShelfOddity

Thunderjets were not known for having excess power. The Allison J35 struggled to get the airplane airborne with anything more than a pilot onboard. Lack of kilonewtons in powerplant compartment was offset by abundance of stencils across the fuselage.

Our stencils are the ones visible looking at the airplane from top and the sides. We really see little point in adding decals that go at the bottom of fuselage, and will never be seen again. If your opinion differs - sorry :)

This drawing would probably fit on page 1 with all other views.  
But since this is issued as pdf file we can give them a little  
more space and simply add another page for top view only.

BTW - if you wish to print this instruction - be sure to select  
"Actual Size" in Reader print options, this will produce true  
1/144 scale drawings on A4 format.
