1/144 Chains 65x50mm (8x4.97m)

Shelf
Oddity

There are situations when all the Tomcats, Prowlers, Hellcats, Sea Furies, Skyraiders, Crusaders, Hornets, Skyrays, Demons, Banshees, Buccaneers, Hawkeyes, Rafales, Seafires, Corsairs, Skyhawks, Sea Vixens, and even the Phantoms (yes, even the Phantoms...) are sitting still on the carrier deck and the prevailing attitude among the crew is that they stay that way. Heavy weather included.

This is the time to pop open the crates marked with „CHAINS” stencils and tie the damn aircrafts to the deck.

With this set you get eight sections totaling in at nearly 40m of 65x50mm link size chain. It is the smallest chain link our current technology allows. We made several attempts to make links overlapping, as in a real chain, but all we came up was a set of innovative curses. Here is next best thing: twist.

Required equipment: two pairs of tweezers, advisably one of self-locking type. Magnifying glass - maybe. Hold the chain securely leaving one link free, twist the free link by 90deg, move to next one, repeat until the end of chain section. Contact you psychoanalyst every 10-15 scale meters. Do we need to warn this thing is brittle?
