General Remarks:

Set has been designed in 0,02mm accuracy. Etching process may decrease some dimensions and create irregularities. To obtain best results gluing "edge-to-edge" is highly recommended. Assembling irregularities & inappropriates might cause incremental misplacement in further level build. It is highly recommended to use main tripod mast hole on every platforms as guide for appropriate assembling.

Set is intended to be replacement for standard injection part from Fujimi set. For other manufacturers some small modification in plastic parts must be applied.

As for 1942.
